1 范围/Scope

本规格书描述本公司设计开发的锂离子电池产品,它是产品生产和检验的依据,以及让顾客了解产品的规格参数及正确使用方法。

This specification document describes the lithium-ion battery products designed and developed by our company. It serves as a reference for product manufacturing and testing, as well as to provide customers with information about the product's specifications and proper usage methods.

2 测试条件/Test Conditions

2.1测试环境条件/Test Environment Conditions

除非另有规定,本规格书中各项试验应在标准大气条件下进行:

温度: 15℃~35℃

相对湿度: 45%~75%

大气压力: 86kPa~106kPa

Unless otherwise specified, all tests mentioned in this specification document should be conducted under standard atmospheric conditions, which include the following ranges:

Temperature: 15°C to 35°C

Relative Humidity: 45% to 75%

Atmospheric Pressure: 86 kPa to 106 kPa

2.2测量仪表与设备要求/Measurement Instrument and Equipment Requirements

- 2.2.1 测量电压的仪表精度应不低于 0.5 级,内阻应不小于 10KΩN。
- 2.2.2 测量电流的仪表精度应不低于 0.5 级。
- 2.2.3 测量时间的仪表准确度应不低于±0.1%。
- 2.2.4 测量温度的仪表准确度应不低于±0.5℃。
- 2.2.1 The instrument accuracy for voltage measurement should not be lower than level 0.5, and the internal resistance should not be less than $10K\Omega/V$.
- 2.2.2 The instrument accuracy for current measurement should not be lower than level 0.5.
- 2.2.3 The instrument accuracy for time measurement should not be lower than $\pm 0.1\%$.
- 2.2.4 The instrument accuracy for temperature measurement should not be lower than ± 0.5 °C.

3 成品/Final Product

3.1主要技术参数/Key Technical Parameters:

项目	参数	备注
Item	Parameter	Remarks
额定容量	200Ah	0.2C 放电
Rated Capactiy		0.2C Discharge
最小容量	198Ah	
Minimum Capacity		
额定电压	12.8V

	1 个月:-20~60℃	
储存温度	1 month: -20~60°C	
Storage Temperature	3 个月: -10~40°C 3 months: -10~40°C	
	1年: -5~20℃	
	1 year: -5~20°C	
相对湿度	45%~85% RH	
Relative Humidity		

3.2 常规性能/Conventional Performance

项目	测试方法	判定标准
Item	Test Method	Criteria
标准充电 Standard Charging	在环境温度为(25±2)°C条件下,用 0.2C 电流对电池充电,当电压到充电限制压时,改为充电限制压恒压充电,直到充电电流小于 0.02C 停止充电。 Under ambient temperature conditions of (25+2)°C, charge the battery with a current of 0.2C until the voltage reaches the charging limited voltage. Then switch to constant voltage charging until the charging current drops below 0.02C, at which point charging should be stopped.	充电时间≤8h Charging time ≤ 8 hours.

额定容量 Rated Capacity	在环境温度为(25±2)°C条件下,以标准充电方式充满后,搁置 0.5h,0.2C 放电至放电截止电压,记录放电容量。 Under ambient temperature conditions of (25±2)°C, fully charge the battery using the standard charging method, then let it stand for 0.5 hours. Discharge the battery with a current of 0.2C until the discharge cut-off voltage is reached, and record the discharge capacity.	≥最小容量 ≥Minimum capacity
内阻 Internal Resistance	使用AC 1kHz 检测方法 Use the AC 1kHz testing method.	参见3.1内阻项 Refer to 3.1 for Internal Resistance
荷电保持能力 Charge Retention Capacity	电池标准充电结束后,在环境温度为(25±2)℃条件下,将电池开路搁置 28 天,0.2C 放电至放电截止电压 V,记录放电容量。 After the battery has completed the standard charging process, let it stand for 28 days at ambient temperature conditions of (25±2)℃. Discharge the battery with a current of 0.2C until the discharge cut-off voltage V is reached, and record the discharge capacity.	≥初始容量的 85% ≥ 85% of the initial capacity.
循环寿命 Cycle Life	在环境温度为(25±2)°C的条件下,以标准充电方式充满后,搁置 0.5h,然后以电流 0.2C 恒流放电到放电截止电压,放电结束后,搁置 0.5h,再进行下一个充放电循环,直至连续两次额定容量<80%。 Under the condition of ambient temperature (25±2)°C, the battery is fully charged using the standard charging method, followed by a 0.5-hour rest period. Then, it is discharged at a constant current of 0.2C until the discharge cut-off voltage is reached. After the discharge, a 0.5-hour rest period is observed before starting the next charge and discharge cycle. This process is repeated until the rated capacity reaches or falls below 80% for two consecutive cycles.	循环次数≥6000 次 Number of cycles: ≥6000 times

3.3 安全性能/Safety Performance

项目	测试方法	判定标准
Item	Test Method	Criteria
常温外部短路 Ambient Temperature External Short Circuit	电池充满电后,放置在温度为 25°C±2°C的条件下,待电池温度达到 25°C±2°C时,在放置 30min,在用导线连接电池正负极端,并确保全部 外部电阻为 80±20 毫欧,(导线的电阻率温度系数小于 5*10 ⁻³ /°C)当 出现以下两种情形,实验终止:a)电池温度下降到比峰值低20%,b)短接时间达到 24H。 After fully charging the battery, place it in a temperature-controlled environment at 25°C±2°C. Once the battery temperature reaches 25°C±2°C, let it rest for 30 minutes. Then, connect the battery terminals with a wire, ensuring that the total external resistance is 80±20 milliohms (with a wire resistance temperature coefficient less than 5*10-3/°C). The experiment will be terminated under the following conditions: a) If the battery temperature drops by 20% compared to the peak value, or b) If the short-circuit time reaches 24 hours.	电池应不爆炸、 不起火、最高温 度不超过 150℃ The battery should not explode, catch fire, or exceed a maximum
高温外部短路 High Temperature External Short Circuit	电池充满电后,放置在温度为 55°C±5°C的条件下,待电池温度达到 55°C±5°C时,在放置 30min,在用导线连接电池正负极端,并确保全部 外部电阻为 80±20 毫欧,(导线的电阻率温度系数小于 5*10³/°C)当 出现以下两种情形,实验终止:a)电池温度下降到比峰值低20%,b)短接时间达到 24H。 After fully charging the battery, place it in a temperature-controlled environment at 55°C±5°C. Once the battery temperature reaches 55°C±5°C, let it rest for 30 minutes. Then, connect the battery terminals with a wire, ensuring that the total external resistance is 80±20 milliohms (with a wire resistance temperature coefficient less than 5*10-3/°C). The experiment will be terminated under the following conditions: a) If the battery temperature drops by 20% compared to the peak value, or b) If the short-circuit time reaches 24 hours.	电池应不爆炸、不起火、最高温度不超过 150°C The battery should not explode, catch fire, or exceed a maximum temperature of 150°C.

3.4环境适应性/Environmental Adaptability

项目	测试方法	判定标准
Item	Test Method	Critera
高温使用 High- temperature usage	将满电的样品放在高温实验箱中,实验箱中的温度设为电池规定的充电 上限温度和放电上限温度,电池的充电和放电的上限温度及 80°C中的 最大值,待电池表面温度稳定后,保持 7H。 Place the fully charged samples in a high-temperature test chamber, setting the temperature in the chamber to the upper limit for charging and discharging specified for the battery, as well as the maximum value within 80°C. After the surface temperature of the battery stabilizes, keep it for 7 hours.	切断电源,电池 应不爆 炸、不起 火和不漏液 Cut off the power supply, the battery should not explode, catch fire, or leak.

振动

Vibration

电池充满电后,将电池或电池组固定在振动台的台上, 不可使电池或电池组变形, 采用正弦波进行振动, 并以 对数扫频方式在 15min 内从 7Hz 扫频到 200Hz 并返回 到 7Hz。振动沿样品互相垂直的 3 个方向(其中一个方 向必须与样品正负极所在平 面垂直)进行,每个方向按 上述对数扫频方式重复 12 次,振动 3h。对数扫频方式 如下: 7Hz-18Hz 保持 9.8m/s² 的峰值加速度,将振幅 保持在0.8mm(位移为1.6mm)直至峰值加速度达到 78.4m/s² (频率约为 50Hz)。保持78.4m/s² 的峰值加速 电池不泄漏、不 度直到频率增长到200Hz。实验后在对电池进行一次充 破裂不起火和 放电循环。 不爆炸 After the battery is fully charged, fix the battery or battery pack on the vibration table without causing any The battery deformation. Use a sine wave for vibration and perform logarithmic sweep frequency from 7Hz to 200Hz within 15 should not leak, rupture, catch minutes and return to 7Hz. The vibration is conducted in fire, or explode. three directions perpendicular to each other (one of which must be perpendicular to the plane where the positive and negative terminals of the sample are located), repeating the logarithmic sweep frequency method 12 times in each direction. The vibration lasts for 3 hours. The logarithmic sweep frequency method is as follows: from 7Hz to 18Hz, maintain a peak acceleration of 9.8m/s² while keeping the amplitude at 0.8mm (displacement of 1.6mm) until the peak acceleration reaches 78.4m/s² (at a frequency of approximately 50Hz). Maintain the peak acceleration of 78.4m/s² until the frequency increases to 200Hz. After the experiment, perform one charge-discharge cycle on the battery. 充电结束后,搁置 1-4H 后进行测试。将电池样品由高 度为 1000mm 的位置自由跌落到置于混凝土板上,从 X、 Y、Z 正负方向(六个方向) 每个方向自由跌落 1 次。 (1000mAh 以上的高度1000MM, 1000mAh以下的 不泄漏, 不起火 1500MM) . 和不爆炸 After the charging is completed, let the battery rest for 1-4 hours before conducting the test. Release the battery sample No leakage, no

自由跌落 Free Fall After the charging is completed, let the battery rest for 1-4 hours before conducting the test. Release the battery sample freely from a height of 1000mm and let it fall onto a concrete plate, performing one free fall in each of the positive and negative directions of X, Y, and Z axes (six directions in total). (For batteries with a capacity of 1000mAh or higher, the height of the free fall is 1000mm, while for batteries with a capacity below 1000mAh, the height is 1500mm).

No leakage, no fire, and no explosion.

	电池快速充电或标准充电后,将样品搁置在(25±2)℃	电池应不泄漏,
	真空箱中,真空箱密闭后,逐渐减少其内部压力至不高	不泄气、不破裂
低气压	于 11.6kPa(模拟海拔 15240m) 并保持 6H。	不起火和不爆
	After rapid charging or standard charging, place the sample	炸
Low Pressure	in a (25±2)°C vacuum chamber. Once the vacuum chamber	The battery should
	is sealed, gradually reduce the internal pressure to no	not leak, vent,
	higher than 11.6kPa (simulating an altitude of 15240m) and	rupture, catch fire,
	keep it for 6 hours.	or explode.

4.2.3 端口定义及连接图/Port Definition and Connecting Table

端口名称		说明		
Port Name	Explain			
	连接到电	1.芯组的总负极		
B-1, B-2	Connecte	d to the overall negative terminal of the battery pack		
	充/放电负极端口			
C-1, C-2		/discharging negative terminal port		
		1 (蓝牙接口)		
J6		ication interface (bluetooth interface)		
	加热正极	数 红色线		
10		positive pole red wire		
Ј8	加热负极			
		negative pole black wire		
	加热正极	·· — · •		
	Heating positive pole red wire			
J7	加热负极黑色线			
	Heating negative pole black wire			
	温度检测			
J2&J3	-	ture detection		
	В0	连接到第1节电芯负极		
1.5		Connected to the negative terminal of Cell 1		
J5	B1	连接到第1节电芯正极		
		Connected to the positive terminal of Cell 1		
	B2	B2 连接到第2节电芯正极		
		Connected to the positive terminal of Cell 2		
	В3	连接到第3节电芯正极		
	D.4	Connected to the positive terminal of Cell 3		
	B4	连接到第4节电芯正极		
		Connected to the positive terminal of Cell 4		

5 包装、储存、运输/Packaging, Storage, and Transportation

5.1包装/Packaging

- 1) 装有电池产品的包装盒应放在干燥、防尘、防潮的包装箱内。
- 2) 包装示意图
- 1) Packaging boxes containing battery products should be placed in dry, dust-proof, and moisture-proof packaging boxes.
- 2) Packaging diagram

5.2 储存/Storage

1) 产品应存放在干燥,通风,并能防雨,雪的室内,不应与活性化学物品或起尘物品存放在一起,箱体应放妥垫起,距地面不小于 100mm。

- 2) 产品应避免受阳光直射,离热源(暖气设备等)不应少于2m。
- 3) 产品不应倒置及卧放,不应受任何机械冲击或重压。
- 4) 电池或电池组应在荷电不超过 30%~50%的状态下以及环境温度为 5℃~35℃的条件下,进行存储或运输。
- 1) The product should be stored indoors in a dry, well-ventilated area that is protected from rain and snow. It should not be stored together with reactive chemicals or dusty materials. The product should be properly placed on a pad or raised surface, with a distance of at least 100mm from the ground.
- 2) The product should be protected from direct sunlight and kept at least 2 meters away from heat sources such as heating equipment.
- 3) The product should not be inverted or placed horizontally, and it should be protected from any mechanical shocks or heavy pressure.
- 4) Batteries or battery packs should be stored or transported in a state of charge not exceeding 30% to 50% and under ambient temperatures of 5°C to 35°C.

5.3运输/Transportation

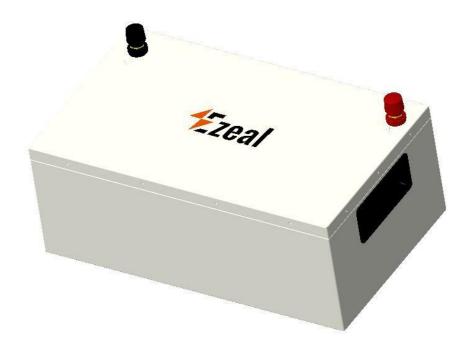

- 1) 在运输过程中,产品不应受到剧烈机械冲击,暴晒,雨淋,不应倒置。
- 2) 在装卸过程中,产品应轻放,严防摔掷,翻滚,重压。
- 1) During transportation, the product should not be subjected to severe mechanical shocks, prolonged exposure to sunlight, or rain. It should not be inverted.
- During loading and unloading, the product should be handled with care to prevent dropping, rolling, or excessive pressure.

6 成品尺寸及接口说明/Product Dimensions and Interface Description

成品尺寸: L149*W89*H59,单位mm,输入输出接口: M8 螺丝,橙正、黑负。

Product dimensions: L149*W89*H59 (in millimeters). Input/output interface: M8 screw, orange positive, black negative.

7 使用说明与注意事项/Instructions and Precautions

7.1使用说明/Instructions

- 1) 使用电池前,请仔细阅读使用说明书和电池表面标识。
- 2) 请在正常的、室内环境中使用电池。温度: -20~+35℃, 相对湿度: 55±20%。
- 3) 在使用过程中,应远离热源、高压,避免儿童玩弄电池。切勿摔打电池。本电池只能使用配套充电器 充电。不要将电池放在充电器中充电超过 24h。
- 4) 切勿将电池正负极短路,切勿自己拆装电池,也勿让电池受潮,以免发生危险。
- 5) 长期不用时,请将电池储存完好。让电池处于半荷电状态。请用不导电材料包裹电池,以避免金属直接接触电池,造成电池损坏。将电池保存在阴凉干燥处。
- 6) 废弃电池请安全妥当处理,不要投入火中或液体中。
- 1) Before using the battery, please read the user manual and check the surface markings of the battery.
- 2) Please use the battery in normal indoor environments. Temperature: -20 to +35°C, relative humidity: 55±20%.
- 3) During use, keep the battery away from heat sources and high voltage, and prevent children from playing with the battery. Do not drop or strike the battery. Only use the provided charger to charge the battery. Do not charge the battery in the charger for more than 24 hours.
- 4) Do not short-circuit the positive and negative terminals of the battery, and do not disassemble the battery by yourself or let the battery get wet to avoid potential hazards.
- 5) When not in use for a long time, store the battery in a good condition. Keep the battery in a partially charged state. Wrap the battery with non-conductive material to prevent direct contact with metal, which may damage the battery. Store the battery in a cool and dry place.
- 6) Dispose of the battery properly and safely. Do not throw it into fire or liquid.

7.2注意事项/Precautions

- 1) 请不要在强阳光爆晒的环境下使用电池,以免发热、变形、冒烟。至少避免电池性能下降、减少寿命。
- 2) 电池中装有保护电路可以避免各种意外情况的发生。不要在产生静电的场所使用电池,因为高压静电容易损坏保护板,而导致电池工作不正常,发热、变形、冒烟或起火燃烧。
- 3) 推荐的充电温度范围是 0-45℃。在超出此范围的环境中充电有可能造成电池性能下降、减少寿命。
- 4) 在使用电池之前,请仔细阅读使用手册并经常在需要时阅读。
- 5) 请使用专用充电器和推荐的充电方式,在推荐的环境条件下给电池充电。
- 6) 在第一次使用电池时,若发现电池不整洁或有异味等不正常现象,不可继续使用电池,应将电池返回销售商。
- 7) 儿童使用电池前,应受父母指导,并在使用中受监督是否正确。
- 8) 电池应放在孩童不能得到的位置。应避免孩童将电池从充电器取出、玩弄。
- 9) 假如皮肤或衣物接触到电池漏液,请用清水冲洗,以免造成皮肤不适。
- 10) 购买电池时,请注意销售商联络方法。以便在需要时及时与销售商取得联系,得到咨询。
- **11)** 保用期是自出厂之日起十二个月。但是,属于使用不当而非质量问题,即使在保用期内生产厂家也不会无偿更换新电池。

- **12)** 如果将电池用于其他设备,请与供应商讨论保护功能的完善性。至少应该咨询电池的大电流、快速充电、特殊应用的问题。
- 1) Please avoid using the battery in environments with strong sunlight to prevent overheating, deformation, and smoking. This can cause a decrease in performance and shorten the battery's lifespan.
- 2) Batteries with built-in protection circuits can prevent various unexpected incidents. Do not use the battery in places where static electricity is generated, as high-voltage static electricity can damage the protection circuit, resulting in abnormal battery operation, overheating, deformation, smoking, or even fire.
- 3) The recommended charging temperature range is 0-45°C. Charging the battery in environments outside this range may cause a decrease in performance and shorten its lifespan.
- 4) Before using the battery, please read the user manual carefully and refer to it whenever necessary.
- 5) Please use a dedicated charger and follow the recommended charging method to charge the battery in the recommended environmental conditions.
- 6) If you find any abnormalities such as dirtiness or unusual odor when using the battery for the first time, do not continue using it and return the battery to the retailer.
- 7) Children should be guided by parents and supervised during battery usage to ensure proper handling.
- 8) Keep the battery in a place inaccessible to children. Avoid children removing the battery from the charger and playing with it.
- 9) If skin or clothing comes into contact with battery leakage, rinse with water to prevent discomfort.
- 10) Please pay attention to the contact information of the retailer when purchasing the battery, so that you can contact them for consultation when needed.
- 11) The warranty period is twelve months from the date of purchase. However, if the battery is improperly used rather than having a quality issue, the manufacturer will not provide free replacement even within the warranty period.
- 12) If using the battery for other devices, discuss with the supplier regarding the adequacy of protection functions. At least consult about high current, fast charging, and special application issues related to the battery.

7.3 警告/Warning

- 1) 不可与其它类型的一次或二次电池混用,否则会因为不正常的充、放电造成电池发热、冒烟、变形或燃烧。
- 2) 将电池置于孩童不能得到的地方,以避免孩童噬咬或吞咽电池。如果吞咽了电池,应迅速送医院处理。
- 3) 如果超过正常充电时间很长时间充电器仍在充电,应停止充电。不正常的充电有可能会使电池发热、冒烟、变形或燃烧。
- 4) 不可置于微波炉或其他压力容器中,瞬间加热或结构损坏会使电池发热、冒烟、变形或燃烧。

- 5) 假如发现电池漏液(或有异味),应让电池远离火源。否则,渗漏的电解液会着火,甚至造成其它危险。
- 6) 假如发现电池有异味、变形、变色或扭曲,应让电池离开手机或充电器并弃用。使用不正常的电池会 发热、冒烟、变形或燃烧。
- 1) Do not mix the battery with other types of primary or secondary batteries. Improper charging or discharging can cause the battery to overheat, smoke, deform, or ignite.
- 2) Keep the battery out of reach of children to prevent them from biting or swallowing the battery. If a battery is swallowed, seek medical attention immediately.
- 3) If the charger continues to charge for an unusually long time beyond the normal charging duration, stop charging. Abnormal charging can cause the battery to overheat, smoke, deform, or ignite.
- 4) Do not place the battery in a microwave or other pressurized containers as sudden heating or structural damage can cause the battery to overheat, smoke, deform, or ignite.
- 5) If battery leakage is detected (or if there is an unusual odor), keep the battery away from any sources of fire. Leaking electrolyte can ignite and pose additional hazards.
- 6) If the battery shows any signs of an unusual odor, deformation, discoloration, or distortion, remove the battery from the device or charger and discontinue its use. Using an abnormal battery can result in overheating, smoking, deformation, or combustion.
